                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description: 1st strand cDNA was primed with an oligo(dT) primer (ATGTCGCCTTTTTTTTTTTTTTTT); double-stranded cDNA was synthesized using specific 5 and 3 primers and amplified by PCR. The PCR product was digested with 5il and size selection was performed to exclude fragments <1.5kb.The Sfil-digested PCR product was cloned into distinct pralls sites of pME185.FtZ. XhoI sites just outside the DraIII sites can be used to isolate the CDNA insert. Libraries were constructed by oligo-capping method

NOTE: This is a 'working draft' sequence. It currently
consists of 65 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N. but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Libraries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description: Its strand CDNA was primed with an oligo(dT) primer [ArGTGGCCTTTTTTTTTTTTT]; double-stranded CDNA was synthesized using specific 5 and 3' primers and amplified by PCR. The PCR product was digested with Sfil and size selection was performed to exclude fragments <1.5kb.The Sfil-digested PCR product was cloned tinto distinct Draili sites of pMEIBSFE13. XhoI sites just outside the Draili sites can be used to isolate the CDNA insert. Libraries were constructed by oligo-capping method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostoml;

It currently consists of 13 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     provided by the submittor.
This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

1 58509: contig of 58509 bp in length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Quality coverage: 7.7 in Q20 bases; agarose-fp

                                                                             NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a 'working draft' sequence. It currently consists of 65 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

JOURNAL

COMMENT

gc-help@bcm.tmc.edu

clones are only CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage. SEQUENCING READ COVERAGE: Sequencing is completed to a minimum

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                          ABN81324
```

```
The invention relates to isolated nucleic acid (ABNB1319-ABNB1324),

corresponding to genes differentially expressed in mast cells following

cutivation or in patients with allergic hypersensitivity disease, (I)

that encodes proteins (ABB77569-ABB77575) (II) or a protein fragment of

that encodes proteins (ABB77569-ABB77575) (II) or a protein fragment of

(II) if at least 6 amino acids (II) is useful for identifying binding

construction or (II) is useful for diagnosing or treating a disease

caticaria or atopic dermatitis or mastocytosis) in a subject which

involves determining the level of expression of (I) or (II). A computer

cystem, comprising a database containing information identifying the

expression level in a tissue or at least one mast cell of (I), is useful

consending information to identify the relative expression level of

control of the protein can also serve as a target that

response in a patient. The protein can also serve as a target that

condulate gene expression or activity and as an antigen to raise

colyclonal or monoclonal antibodies. (II) is useful for identifying

agents that modulate expression of the protein or agents, such as

modulating biological activity and function of (II) and thus are useful

for alleviating disease conditions such as allergic bypersensitivity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           seasonal rhinitis, asthma, urticaria, atopic dermatitis or mastocytosis.
                                                                                  Novel isolated nucleic acids that are differentially expressed in mast cells in patients with allergic hypersensitivity, encoding proteins associated with mast cell regranulation and allergic hypersensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the polymorlectide (II) encoding PROST 03. (III) is useful for selectively to generate antibodies (III) to PROST 03. (III) is useful for selectively destroying a cell expressing (I), and for treating a disease-state associated with expression of PROST 03. (III) is useful for selectively cassociated with expression of PROST 03 in a human patient. (III) is useful for diagnosing metastasis associated with (I), in a subject.

(I) is also useful for diagnosing and treating diseases of cell confidention such as prostate cancers. (I) is also useful for generating proliferation such as prostate cancers. (I) is also useful for generating of proliferation such as prostate cancers. (I) is also useful for primary and metastatic tumours. (I) is also useful for stimulating immune caponse to PROST 03 containing cells. (II) is useful in diagnostic assays for detecting the levels of polymorlectides encoding prost or antisense coll in the law of the law of the production of antisense collination and therapeutic purposes. The present sequence represents

C clinical and therapeutic purposes. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                       Novel PROST 03 polypeptides and polynucleotides useful in research, diagnosis and therapeutic applications, particularly for use in cancer
                                                                                                                                                                                                                                                       ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated PROST 03 polypeptide (I) and to the polynucleotide (II) encoding PROST 03. Fragments of (I) were used
                                                                                                                                                                                                                                                       Steinbrecher

This sequence represents a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent able to bind an immunogenic portion of a prostate protein (such as encoded by this sequence). An antibody which binds to an immunogenic portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostate

```
The present sequence was isolated from a breast tumour cDNA library. It is provided in a specification relating to compounds for immunotherapy and diagnosis of breast cancer. Breast tumour antigens and the polynucleotides that encode them may be used in the production of a pharmaceutical composition to be used in the treatment of breast cancer. Proliferated T cells and incubated antigen presenting cells are also required. The polypeptides and polynucleotides may also be used to
                                                                                                                                                                                                                                                                                                                                                                                        of a
